

DESTINATION DENTAL IMPLANTS

“Real World Live Training To Get You There”

Presented by Dr. Larry H. Lindsay

Think this is just another implant course? Think again.

Do you need hands-on experience placing implants to advance your surgical skills but don't want to take too much time out of your office? This 3-day “Dental Implant Bootcamp” is for you! No fluff, no company pushing products, just a solid dental implant “workout” where you treat patients while we are there to coach you along the way.

Your practice will never be the same.

Dr. Larry H. Lindsay invites you to attend this very intense 3-day LIVE Dental Implant Surgical Course in Austin, Texas. The course objective is to prepare participants to treat the partially edentulous patient and to also to utilize grafting, to facilitate future implant placement. **One day of workshops and lectures is followed by two days of Live surgeries performed by YOU.** The number of implants placed during the course is dependent upon patients' clinical needs and relative to exceptional patient treatment. The cases are selected to give the attendees experience in a variety of implant scenarios, such as extraction with immediate implant placement, posterior and anterior implant placement, crestal sinus bump/lift, ridge augmentation, grafting etc. **Attendees will also get hands-on experience treating patients utilizing PRF (Platelet Rich Fibrin)/CGF (Concentrated Growth Factors) as well as all aspects of bone grafting.**

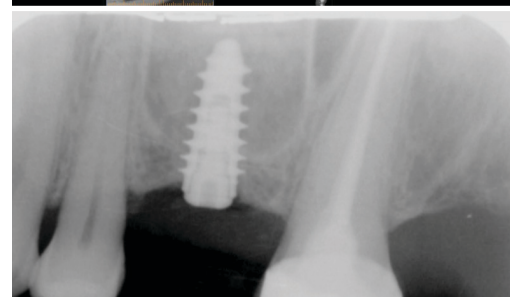

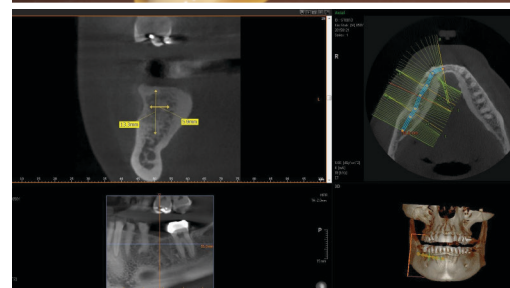

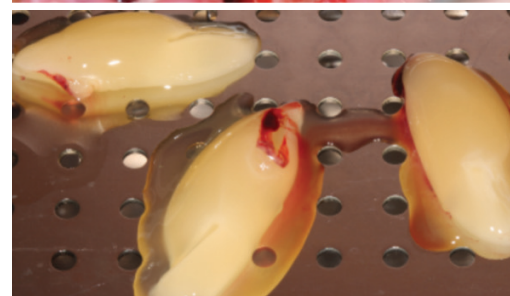

A step-by-step learning methodology ensures that course participants return with the confidence to duplicate the proper protocols in their own practices. An active unrestricted Texas Dental License is required for attendees to be able to actively participate in surgical procedures. Attendees will treat patients that have been thoroughly selected in our prescreening process.

Why spend 3 times the cost of this course traveling to foreign countries, when you can enjoy the same unique learning experience in your own back yard? **Join us in Austin, Texas for a unique learning experience!**

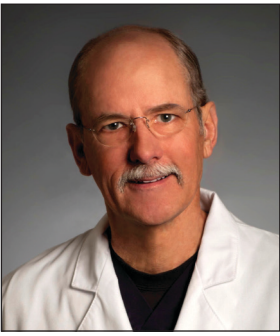

Course Objectives

- Patient evaluation and treatment planning with the prosthetic outcome in focus
- All implant placements and surgeries by attendees treating patients
- PRF (Platelet-Rich Fibrin)/CGF (Concentrated Growth Factors) - utilization and procedure
- Extraction with immediate implant placement
- Surgical protocols
- Different implant types and design
- Implant selection based upon bone density and volume
- Incision and flap design for implants and varied suture techniques
- CBCT evaluation and utilization
- Radiographic interpretation, implant alignment and positioning
- Atraumatic extraction technique, simple socket grafting, predictable bone grafting techniques
- Crestal sinus lift technique

- > Live surgeries performed by attendees treating patients
- > Post-op evaluation ad discussions about cases performed—attendees presenting

Testimonial

"The course was fantastic. If you place implants or are interested in placing implants this course is a must. You earn by doing the procedures not learning by watching. It's an intense course but it is a valuable experience for any practitioner's practice." T. Warren, DDS - Ft. Worth, Texas
